**Subject:** RE: Red and Bonita - logistics and personnel

Eric,

As far as the operational responsibility, here is the plan:

Packer Test: The START personnel (1) will be responsible for the Packer Test documentation, and set up / take-down operation with the assistance from ERRS and DRMS; ERRS operate the pump outside the mine. ERRS will also assist with set up underground. A sub-contractor to ERRS will perform the borehole drilling .

Water Management: START personnel (1 or 2) will be responsible for implementing the water treatment operations with respect to pH adjustment and flocculant addition and monitoring the discharge. Again, ERRS will perform water management operations with respect to pump management, filtering and the conveyance system – piping, etc.

Jan and I discussed the likely overlap with the person that will work on the Gold King project, and that person could be present at the R n B work to get familiar with both sites and operational set up.

Let me know if you have questions. Thanks for the push to get ready.

Steve

**Subject:** Red and Bonita

Steve,

I apologize for the barrage of emails that I sent you yesterday, I am out of town the end of this week and all next week, so I'm trying to get everything situated for Red and Bonita.

I will need someone to work the water pump during the packer test, is there anything else we would need a third person for? Someone will need to stay at the pump at all times in case something goes wrong and we need it shut off.

Are we starting Monday (9/8) morning or should we use Monday as a mobilization day?

Per our contract with US EPA, I need to have you and Kristen approve the purchase of the Baski packer. It is going to cost 2867 plus tax. I can pick it up as soon as I pay for it or have it shipped.

I believe that is all except the equipment order that I will put together this evening or tomorrow.
